

# Atlantic White Cedar

*Chamaecyparis thyoides*

Height: 50-70' | Spread: 30-40' | Light ☀-☾ | Moisture: Wet to moist

Tall evergreen, actually a cypress tree despite the name, that can be found in bogs and swamps up and down the east coast. As such this tree does not do well in dry and drought conditions. Songbirds and deer rely on the Atlantic White Cedar for food and butterflies use it had a larval host plant. Average lifespan of 200 years and can live up to 1000 years!
